

Serial No.10/753,280

Amendments to the Specification:

Kindly amend the paragraph beginning at page 5, line 23, and continuing to page 6, line 1, as follows:

In the drawings, the brace 10 includes an elongated strap structure 11 having first 11a and second 11b strap portions. First portion 11a is configured to wrap about the lower leg 12, just above the protruding malleolus region 12a, which blocks the wrap from shifting downwardly. See in Fig. 3 lower edge beading 11aa of the strap first portion retained just above the protrusion 12a at the user's right ankle. The wrapped first portion 11a is initially fixed in position by an attachment means, one example being hook and pile (VELCRO) elements shown at 13 on the outer side of 11a, and at 14 on the inner side of a tab or flap 15 attached at ~~15b~~ 15a to the end of 11a.
